Larvadex™

Dosage form: Premix.

Presentation: 20 kg bag.

Composition: Cyromazine (triazine) 10 g/kg.

Indication: Prevents development of flies in poultry manure. For blending with poultry feed only.

Warnings:

- Handle with care.
- Keep out of reach of children, uninformed persons and animals.
- Although this remedy has been extensively tested under a large variety of conditions, failure thereof may ensue as a result of a wide range of reasons. If this is suspected, seek veterinary advice and notify the registration holder.

Precautions: Larvadex™ is safe for humans and livestock, but it is essential that it must only be used as directed.

Directions for use: Use only as directed.

Blending: 1 kg Larvadex™ per 2 000 kg (2 tons) of the required poultry ration.

Note: Preblend: Mix the 1 kg of Larvadex™ first with 10 kg of feed before finally mixing with the feed bulk. It is essential that all ingredients are thoroughly mixed to ensure even distribution of Larvadex™ throughout the feed.

Feeding: Commence feeding Larvadex™-treated feed to poultry when fly activity is noticed and continue throughout the fly season.
It is essential that all poultry receive Larvadex™-treated feed where flies are a problem.

Note: Larvadex™ in the daily poultry ration, passes through the digestive tract and is excreted in the manure. In the case where Larvadex™ feed is used where existing old, untreated manure is already present, maximum fly control will only be achieved 2 to 3 weeks later.
